Workflow Exploration Report

User Scenario

Website: <https://atid.store>

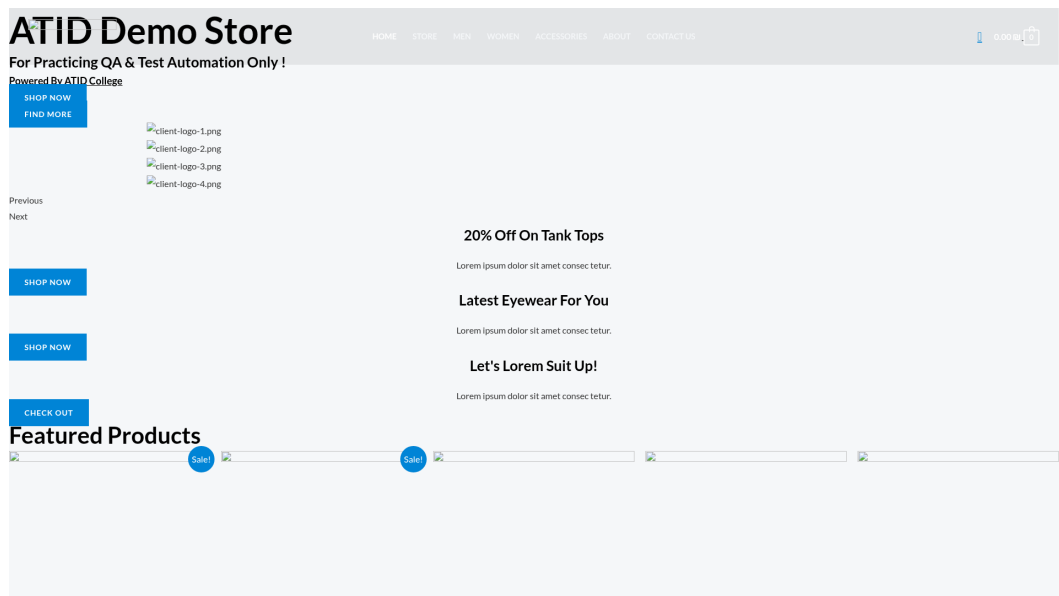

Feature Area: 0e93f2ab-5c33-47e7-b6a3-c91e9a543d81

Goal: User Scenario

Generated: April 27, 2026 at 06:23 AM

Confidence: 95%

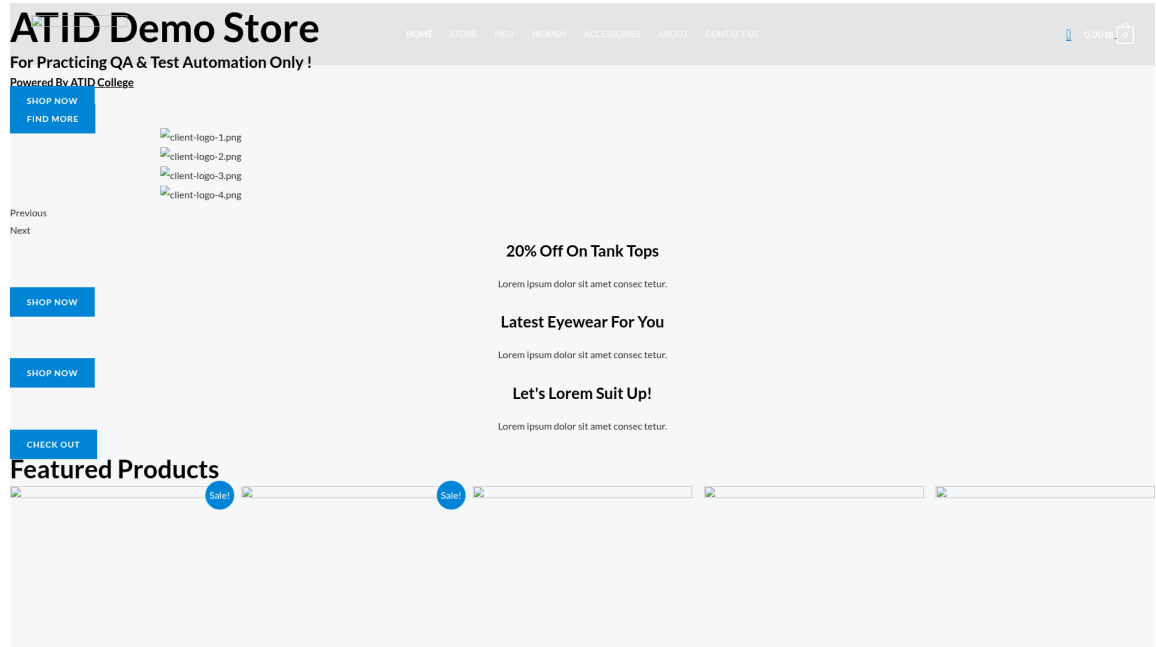

The AI tested the user journey of shopping on the ATID Demo Store, successfully navigating from the homepage to the product detail page and attempting to add a product to the cart. The workflow was blocked by an HTTP ERROR 429 before the checkout step, preventing completion of the purchase process.

Step-by-Step Walkthrough

1. Homepage Loaded

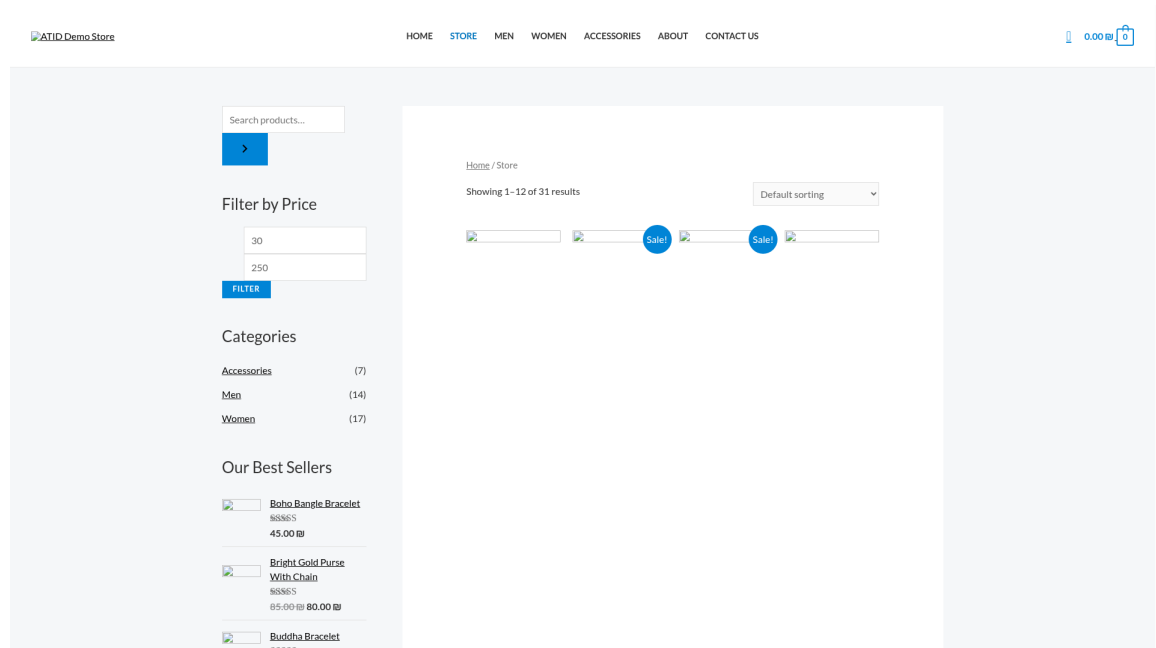

The AI navigates to the ATID Demo Store homepage, confirming the site is accessible and ready for shopping.

https://atid.store

2. Storefront Displayed

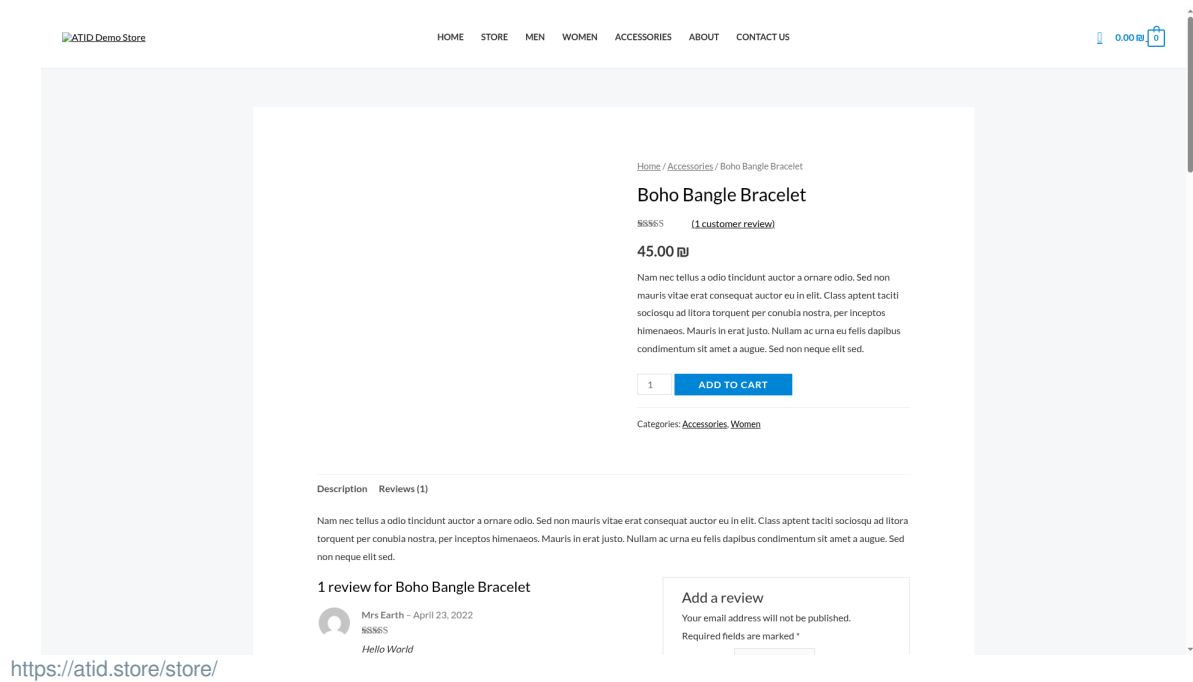

The AI clicks 'Shop Now' and is taken to the store page, where products and categories are listed for browsing.

https://atid.store/

3. Product Detail Page

The AI selects the 'Boho Bangle Bracelet' and views its detail page, preparing to add the item to the cart.

4. Blocked by Error 429

When attempting to add the product to the cart, the AI encounters an HTTP ERROR 429, blocking further progress.

Discovered Test Scenarios

#	Scenario	Type	Priority
1	Discovered Workflow: partial_flow -- Partial User Journey	partial_flow	high

Discovered Workflow: partial_flow -- Partial User Journey

Covers the user journey up to adding a product to the cart. Blocked by HTTP ERROR 429 before checkout.

A user visits the homepage, starts shopping, selects a product, and adds it to the cart. The flow is interrupted by a server error before checkout.

- Use `waitForSelector` for navigation transitions.
- Validate that 'Add to cart' triggers the expected UI change or error.
- Handle HTTP 429 gracefully in test assertions.
